NOVELTY - Production of a discoloration indicator comprises treating a granular adsorbent, e.g. silica gel, by dyeing liquors of bromocresol green, bromophenol blue, methyl red, bromothymol blue, neutral red and methyl orange to obtain six indicator products of yellow gel A, B and C, red gel A and B and shellac A. Their color can be reversibly changed with a difference in water content.

USE - Drying or indicating humidity, indicating acid and alkaline gas components in environment, reducing environmental pollution, removing humidity, displaying humidity and cleaning process in various industrial fields.
